

HEALTH WITHOUT MEDICINE

by: Lev Kipnis, D.N.

The history of the supplement's creation was completely unexpected. After the Chernobyl disaster, military scientists and doctors had been looking diligently for something to increase the body's resistance to ionizing radiation. A substance was discovered, researched, and recommended for use. After this, incredible things began to happen. The effects of the substance were not just limited to resistance to radiation, but began to meddle in all of the disruptions of metabolism (whether the effect was desired or not) and showed itself to be effective in helping the body fight metabolism-related diseases and many others, starting with colds and ending with heart attacks. Despite the fact that none of the scientists were recognized for their efforts, research continued and they found that the main active ingredient in the supplement exists in different amounts in almost all remedies used in folk medicine.

The next gift the substance gave its creators was its ability to improve the immune system, prevent and relieve stress in the best possible way, and defeat the after-effects of many types of poisoning, including alcohol poisoning.

Then, the military scientists conducted many experiments using the huge resources that they had, and after several years the new supplement was up for public sale and immediately showed great effectiveness.

But what gave this supplement so many curative powers? What is this magical ingredient? The study of substances that control the assimilation of oxygen and production of intercellular energy has made it possible to find the most active substance - succinic acid (succinate). Another name of succinic acid is amber acid because in the long years of its use one common method of obtaining it was extracting it from amber.

The curative power of succinic acid has been known about for over 500 years. Ancient Armenian manuscripts on medicine from 1492 describe in detail how to extract succinic acid from amber and how to use it for medicinal purposes. In Europe the studies of the healing properties of succinic acid and its salt, succinate, as well as their roles in biological environments were started in the 18th century by famous scientists Louis Pasteur and Robert Cox who studied the effects of succinic acid on themselves.

In the middle of the 20th century a British scientist named Hans Krebs discovered in the cells of living organisms the citric-acid cycle, in which the salt of succinic acid, succinate, plays a very important role.

This cycle is one of the body's main sources of energy and was later named after its discoverer - the Krebs cycle.

The reason succinate is unique is due to its ability to keep the Krebs cycle functioning even during hypoxia. It also serves cells as both a source of raw materials and a catalyst of bioenergetic processes. This is exactly why the body's need for succinate surpasses its ability to produce it, but the need must still be fulfilled with the consumption of food. Unfortunately,

succinic acid is barely digested by the body on its own and only after the discovery of a method of absorption of succinate by the digestive tract and the mechanism of its assimilation, the first dietary supplement based on a biologically active form of succinic acid was developed. It was named RespiraCell, which reflects the essence of its effect on the body - the saturation of cells with oxygen and energy.

Russian scientists are not the only ones who are studying the effects of succinate on humans. Scientists from the United States, Germany, Japan, and many other countries are also hard at work on finding all of its potentials.*

Recent studies of succinic acid and its role in the health of man surpassed all expectations. The research determined that succinic acid causes an increase in the body's immunity to ionizing radiation, infections, poisonings, quartz and alum silicate dust, and other harmful factors. In other words, it raises the body's overall immune system. This is exactly what a person needs to live in today's world, which constantly bogs down our immune system with many harmful factors at once.

The new supplement RespiraCell began showing incredible results from the start. These included a high
